

- 300kg (700lb) capacity
- 20mm (0.8in) LCD display with LED backlight
- Tough, compact dust and waterproof ABS housing
- Internal 12VDC rechargeable NiMH battery
- Animal weighing
- Complete scale - weight indicator and load cells combined
- Option: EID compatible, 10,000 records

## agWEIGHr H300 Hanging Scale

The agWEIGHr H300 indicator builds on over 20 years of industrial design experience to create a cost effective reliable scale that is ideal for use in livestock weighing applications including calf and game weighing. With a resolution of 0.02kg under 10kg it is also suitable for fleece weighing.

**Rinstrum liveweight:** The liveweight algorithm used in our instrumentation has been refined over many years in a variety of applications including cattle and sheep drafting and veterinary scales.

**Modes:** Manual and automatic modes allow for flexibility depending on the application. Static weighing is achieved by simply using manual mode. Animal weight can be captured either in manual mode by using the WEIGH key or if in automatic mode the live weight is automatically captured.

**Drafting:** Automatic 3 band drafting is provided standard. A draft target is easily set with a long press of the DRAFT key and on screen arrows show the operator to which band the animal has been allocated.

**Draft Statistics:** The operator can scroll through the draft statistics for the session on screen:

- Total Weight
- Average Weight
- Number of head

**Auto Ranging:** The H300 automatically ranges to the best resolution for any given load - 0.02kg through to 1kg increments at capacity).

The superior performance of the instrumentation removes the need for a separate high resolution mode.

### Electronic ID:

The H300-EID version is EID compatible for use with a Bluetooth wand that allows for individual animals to be identified by EID tag. Up to 10,000 individual animal results can be stored in the indicator for download to a PC or tablet - individual files for each Session.

### Specification Table

Approvals	FCC, CE, C-tick
Operating Environment	Temperature: -10° to +50C ambient (14° to 122° F) Humidity: <90% non-condensing IP65
Display	LED Backlit LCD with six 20mm (0.8") high digit
Power	Internal 12V battery pack - rechargeable NiMH ON/OFF key with memory feature
Materials	ABS Housing, Stainless Steel load cell, hooks and eyes
Packing Weight	3kg (6.6lb)
Functions	Live Animal Weighing, Unit switching, Drafting
Modes	Manual Mode: Static Weighing /Manual Animal Weighing Automatic Mode: Automatic Animal Weighing
Auto-ranging	Weight 0..10kg Resolution 0.02kg Through to Weight 250..300kg Resolution 1kg
<b>Drafting</b>	
Live Weight Drafting	3 bands
Current Draft Statistics	Total Weight / Average Weight / Number of head
<b>H300-EID</b>	
Individual animal results	10,000 records in the indicator
Bluetooth	Wireless EID
Optical Data Interface (rinLINK) PC Interface Android App	Download data files from indicator to PC Transfer data from yards to Android tablet
